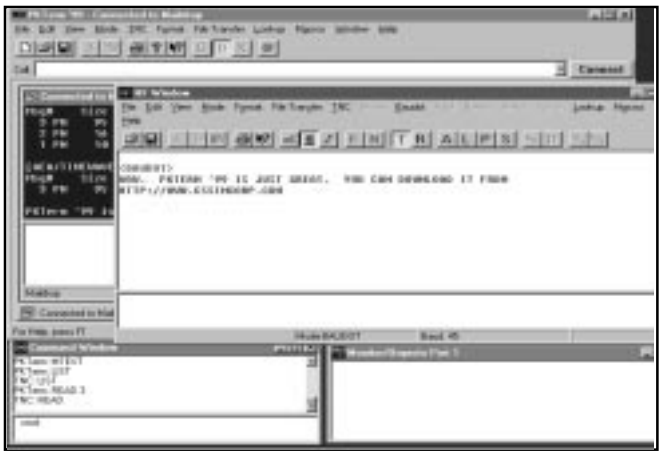
PK-TERM'99

TIMEWAVE

Technical Data Sheet

Windows Terminal Program



- ***Controls Timewave TNCs PK- 232MBX/ DSP, PK-900, PK-12, PK-96, DSP-232, DSP-1232/2232***
- ***Runs under Windows® 95/98/NT/2000***
- ***User defined macros***
- ***Log Windows compatible***
- ***Rig Control built-in***
- ***Runs minimized or in background***
- ***Has complete macro key facility***
- ***Built-in QSO logging program***
- ***On-screen help***
- ***Text & binary file transfer with YAPP***
- ***Supports COM1 to COM35***

Windows of Opportunity

Timewave and Creative Services Software present the world's first 32 bit terminal software for the Timewave/AEA TNC – Pk-Term '99! The software takes advantage of true multitasking in Windows 95, 98 and Windows NT, and uses standard Windows commands for ease of use. From CW to HF packet, from single to dual port NCs, it's now more fun to use the digital modes of amateur radio. And you can download it off the Internet!!

Controls Timewave & AEA TNCs

PK-TERM'99 controls the whole line of Timewave data controllers with host mode. Using Windows' multi-tasking abilities, you can have dual-port operation with a PK-900 or DSP-2232. Imagine receiving DX Cluster information from a local packet net on your PK-900's port 2, and working RTTY DX on port 1 of the PK-900 - all at the same time!

Makes Life Easier

Whatever your TNC can do, PK-TERM'99 makes it easier. Run HF or VHF packet (9600 bps or 1200 bps). Work PACTOR, AMTOR, RTTY (Baudot/ASCII), Morse, Signal Analysis, NAVTEX, or Dumb terminal modes.

Parameters for each TNC

There are many user-definable parameter menus for each mode and TNC which can be set up quickly and called upon when needed. All the commands you can never remember are visually displayed in the various menus and windows. Plus, help is available at any time. Because of the versatile parameter menus, beginners can learn more about the commands they are using for the first time. Advanced users will realize increased efficiency and easier control of two TNCs. PK-TERM'99 is a must for anyone who wants to unleash the full power of their Timewave TNC.

Log Windows Compatibility

That's right-PK-TERM'99 is fully compatible with Log Windows. This means you can have the powerful TNC control of PK-TERM'99, coupled with the great database, logging, rig control and tracking features of Log Windows.

Mailbox Features

Check your packet, PACTOR, and AMTOR messages using PK-TERM'99's MailDrop interface. The easy-to-use MailDrop interface makes reading, writing, editing, and filing messages simple.

More Features

Separate windows for QSO logging, file transfers, Help, and much more. Full access to other programs and Windows utilities. Information in the transmit window can be saved to the Windows clipboard for cutting and pasting elsewhere.

Requirements

486 PC or better, Windows 95, 98, NT, 2000 or better, 4 MB free hard disk space, and 2 MB RAM (4 MB recommended), and a Timewave data controller with August 1991 firmware or later.
